Software Engineering — Full-Stack & Backend Development

Education

Vellore Institute of Technology (VIT), Vellore 2024 – Present
B.Tech in Computer Science and Engineering *CGPA: 8.92/10*

Experience

Independent Developer – Vedic Wellness Jan 2026 – Present
Full-Stack Web Development

- Built and deployed a full-stack e-commerce platform for a real-world Ayurvedic business, translating business requirements into customer, catalog, cart, checkout, order, and administrative workflows using Next.js, TypeScript, PostgreSQL, and Prisma.
- Designed the application's data and authorization model, implementing relational database workflows, session-based authentication, role-based access control, and transactional order handling across customer and administrative operations.
- Hardened application workflows with server-side validation and security controls, including CAPTCHA protection, signup and order rate limiting, protected file uploads, and cache revalidation across customer and administrative operations.

AWS Cloud Practitioner Internship Program – Ethnus May 2026 – Jul 2026
AWS Cloud Computing

- Completed an AWS Cloud Practitioner program with a 98/100 (A) final score, covering cloud architecture, core AWS services, security, pricing, and operational fundamentals.
- Collaborated on a team capstone for a cloud-based voting application, integrating Amazon Cognito, API Gateway, Lambda, DynamoDB, and EC2 to implement authenticated REST-based application workflows.

Projects

LeadBridge | *Next.js, TypeScript, PostgreSQL, Prisma, REST APIs* Jul 2026 – Present

- Built an internal lead-management platform to automate business-query ingestion and organization, providing an authenticated interface for reviewing, editing, routing, and managing leads.
- Designed a modular ingestion pipeline using REST connectors and parser-based processing to transform external lead data through validation into structured PostgreSQL records with Prisma.
- Implemented reliability and governance features including role-based access control, audit logging, retry handling, reporting, and CSV exports; deployed the application on Vercel.

InsightRush | *FastAPI, Python, DuckDB* Hackathon Project

- Built backend services for analytical workloads over uploaded CSV datasets, handling ingestion, schema validation, query execution, and structured API responses.
- Implemented approximate query processing using dataset sampling and statistical estimation to provide faster estimates for COUNT, SUM, and AVG analytical queries.
- Integrated the backend with a frontend client through API contracts carrying query results and execution metadata, collaborating with the frontend developer on the interface between the two components.

Certifications

AWS Certified Cloud Practitioner (CLF-C02) 2026
Amazon Web Services (AWS)

Docker Foundations Professional Certificate 2026
LinkedIn Learning

Technical Skills

Languages: Python, Java, C++, TypeScript, JavaScript, SQL
Web & Backend: React, Next.js, FastAPI, REST APIs, Prisma ORM, Authentication, RBAC
Databases: PostgreSQL, DuckDB, SQLite
Cloud & DevOps: AWS, Docker, Git, GitHub, Vercel
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks
